How planning works today

Thousands of work orders reviewed by hand.

80%

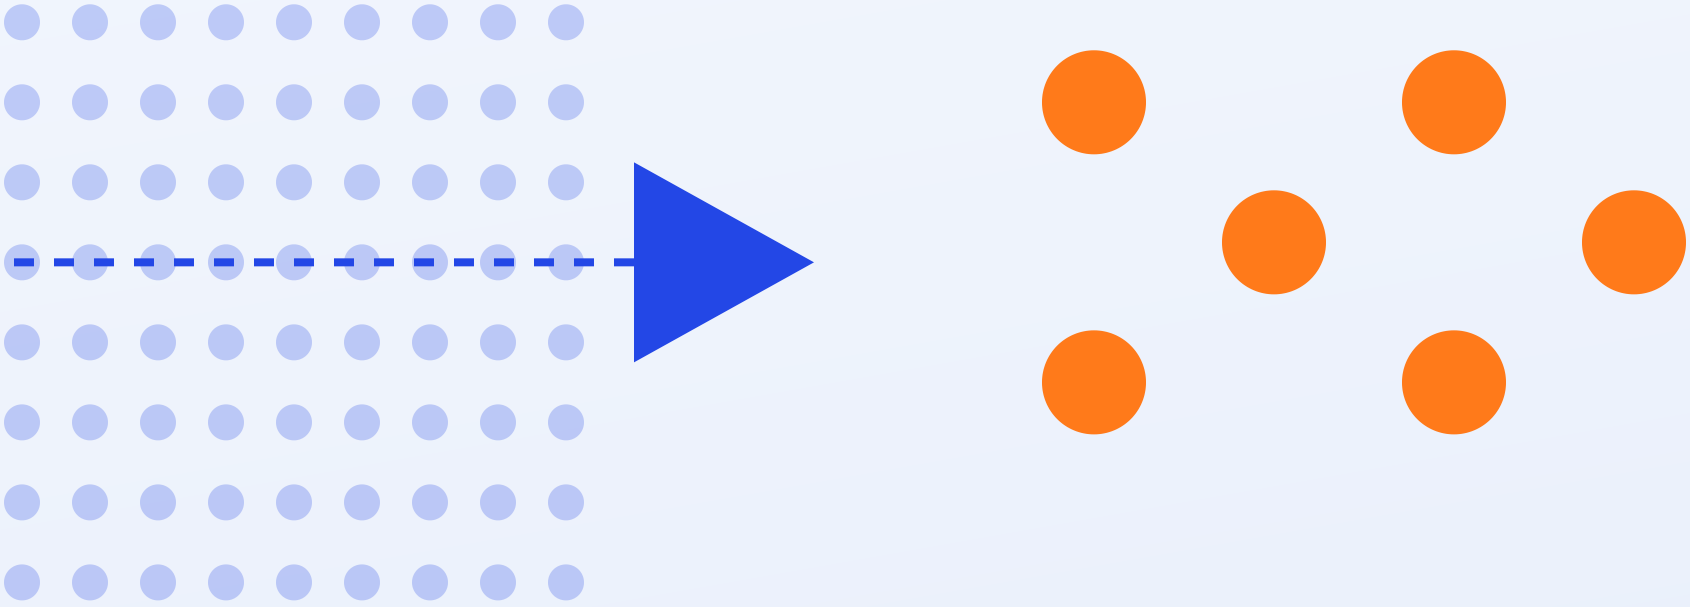

of planner effort goes to items that need no action.

→

VERDANTiS
anticipate• resolve• learn

AI-filtered planner queue

Only the 15–20 items at genuine risk.

Each planner gets a personal queue. Items are flagged only when action is required.

→

Pre-release parts confirmation

Every spare confirmed before the job is released.

- **Right location**
- **Right spec**
- **Right quantity**

The confirmation is logged against the work order record.

When the gap is found

Days ahead, not the morning of the job.

Today

Missing part found on the day: emergency order at a 30–60% premium, or a delay.

With MRO360

Gap flagged days in advance, with a pre-resolved action ready.

Supplier reliability scoring

Scored from what was actually received.

78%
On-time delivery

54%
Lead time consistency

38%
Emergency fulfilment

91%
Specification accuracy

Example scorecard shown in the MRO360 deck. Planners see it at the purchasing decision, before committing.

When parts are at risk

Three ways out, one click each.

Emergency order

Fastest reliable supplier, confirmed.

Inter-plant transfer

Surplus at another site, pre-populated.

Alternate supplier

Pre-qualified, stock confirmed.

→

Transfers come first

Check the other storeroom before calling a supplier.

Cross-site stock is visible in real time. MRO360 recommends a transfer before any external purchase order is placed.
